DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 10-21 are allowed.

The following is an examiner's statement of reasons for allowance: With respect to claim 1, the cited prior art (Final rejection, February 23, 2007) teaches using a MEMS device for electric isolation, but only for the purpose of isolating a sensor from the source. The reference, while inherently including a power transfer structure, does not suggest placing a plurality of arms, at the second end of the beam, in one of a parallel or series configuration. These configurations result in either a voltage or current boost, and, as indicated in applicants' remarks (April 11, 2007), this would not have been obvious in view of previously disclosed power sensor.

Claims 10-21 depend from claim 1, and are allowable as indicated above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishida (US 2004/0007942) discloses a plurality of MEMS devices placed in an array comprising series and parallel devices. Nishida discloses reproducing the entire MEMS device in the array, wherein each device contains a

specific resonant frequency, such that power transfer is ensured regardless of input frequency. Nishida does not disclose or suggest one MEMs device with plurality of movable arms electrically connected in series or parallel.
